The present sequence is that of Protide-2 (PT-2), a peptide antibiotide with distinct effector and activator domains. PT-2 contains a C-terminal antimicrobial peptide effector (RP-1), an N-terminal chemokine-like peptide effector (RP-1), an N-terminal chemokine-like peptide effector (interleukin-8 domain) and an activator site specific for C3 convertase, a complement fixing protease. PT-2 is cleaved into 2 distinct effectors in the presence of C3 convertase. In particular, it was designed to exert antimicrobial activity less than that of RP-1 in the presence of C3 convertase. Dut equivalent to or exceeding that of RP-1 in the presence of C3 convertase. Thus, PT-2 was designed to exert optimal activity in the context of activation of one of the inhalt orbial activity in the context of activation of one of the complement pathways that make up the complement system, which is part of the innate immune response to antigen exposure. PT-2 is an example of context-activated protides of the invention that have 2 or more effectors with individual distinct biological functions and one or more effectors upon context activation. The protides are useful in the diagnosis, prophylaxis and therapy of a broad provides of protides are useful in the diagnosis, prophylaxis and therapy of a broad
                                 New context-activated protide, useful for vascular injury, neoplastic condition, microbial infection, decreased cell death or inflammatory

The present sequence is that of Protide-3 (PT-3), a peptide antibiotide with distinct effector and activator domains. PT-3 contains a C-terminal antimicrobial peptide effector (RP-1), an N-terminal chemokine-like peptide effector (interleukin-8 domain) and an activator site specific for thrombin. PT-3 was designed to be cleaved into 2 distinct effectors in the presence of thrombin. In particular, it was designed to exert cantimicrobial activity less than that of RP-1 in the absence of thrombin, but equivalent to or exceeding that of RP-1 in the presence of thrombin. They, PT-3 exerts optimal antimicrobial activity in the context of thrombin as would be present in the setting of vascular injury or infection. PT-3 is an example of context.activity in the context of invention that have 2 or more effectors with individual distinct connection and one or more corresponding activator sites that can each initiate or amplify the biological function of one or more effectors upon context activation. The protides are useful in the diagnosis, prophylaxis and therapy of a broad range of pathological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is that of Protide-4 (PT-4), a peptide antibiotide with distinct effector and activator domains. PT-4 contains a C-terminal antimicrobial peptide effector (RP-1), an N-terminal chemokine-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New context-activated protide, useful for vascular injury, neoplastic condition, microbial infection, decreased cell death or inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Protide; antibiotide; antimicrobial; interleukin-8; cytostatic.

ö

for matrix metalloproteinase MMP-3, which is produced to dissolve the tissue in front of the growing blood vessel tip to allow for its continued tissue invasion. PT-4 was designed to be cleaved into the distinct effectors in the presence of WMP-9. In particular, PT-4 exerts antineoplastic and/or antimicrobial activity less than that of RP-1 in the absence of WMP-9, but equivalent to or exceeding that of RP-1 in the presence of WMP-9. Thus, PT-4 exerts optimal antineoplastic and/or antimicrobial activity in the context of new blood vessel formation. PT-4 is an example of context-activated proteides of the invention that have 2 or more effectors with individual distinct biological functions and one or more effectors with individual distinct biological function of one or more effectors upon of one or more effectors upon context activator the biological function of one or more effectors upon context activation. The proceides are useful in the diagnosis, prophylaxis and therapy of a broad range of pathological conditions.

ö New antimicrobial peptide composition for the prevention and treatment infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.

Example; Page 67; 221pp; English.

The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acids containing a 7-13 amino acid core sequence (derived from PMP-1 and PMP-2, platelet microbiocidal protein), and retromers, truncations, extensions, combinations, fusions and their derivatives. The possible erructures are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as 

core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fusions; and (2) antimicrobial peptides for potentiating antimicrobial activity of antimicrobial peptides for potentiating antimicrobial activity of leukocytes against organisms such as hacteria and fungi. The antimicrobial peptides are useful as individual antimicrobial agents, agents that enhance, potentiate or restore efficacy of conventional antimicrobials, agents that enhance the antimicrobial conventions and segents to improve efficiency of functions of leukocytes, as disinfectants or preservatives for use in foods and cosmetics and as agents to improve efficiency of molecular conventions of leukocytes, as disinfectants or preservatives for use in foods and cosmetics and as agents to improve efficiency of molecular cology techniques. Antimicrobial peptides of prior art have generally been considered to have undesirable toxicity, immunogenicity and short or are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic convercome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and covercome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and covercome problems of toxicity, immunogenicity, and shortness of duration confidency.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acids containing a 7-13 amino acids containing a 7-13 amino acids companing a periodical amino acids containing a 7-13 amino acids retromers. Intercontact and PMP-2, platelet microbiocidal protein), and retromers, truncations, extensions, combinations, fusions and their derivatives. The possible erructures are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting
             organisms such as pacteria and fungi. The Apromorises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template template template template selected from the group consisting a selected from XZBEREXE, BXZXZEB, BXZXZEB, XBEXZEBEX and its derivatives as selected from the group consisting of XBEXEBEX, REBXZEBEX, REBZXEBEX; and their derivatives selected from the group consisting of XBEXEBEX, REBXZEBEX, REBZXEBEX; where B = at least one positively charged amino acid; X = at least one aromatic amino acid, and where B, X and Z amay be separated by one or more other amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of neutrophils. The peptides overall effect callular disruption and rapid apoptosis of microbial cells. AMYS7463 to AAMS7557 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antimicrobial; platelet microbiocidal protein; PMP-1; PMP-2;

Antimicrobial peptides for potentiating antimicrobial agents active

The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZENENE and its derivatives selected from XZBBZENENE, BXZXB, BXZXZB, XBBXZXBBX and BBXZBENZ; and (b)

crivity or for potentiating antimicrobial agents active against corganisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XBZEXENS and its derivatives selected from the group consisting a second peptide template XBEXZENS, XBEXZENS and BEXZENSZ; and (b) a second peptide template XBEXZENS, XBEXZENS, MEBZZENS, and consisting of XBENSENS, and their derivatives selected from the group consisting of XBENSENS, XBEXZENS, XBEZXENS, and consisting of XBENSENS, AND STREAM, AND STREAM STREAM, AND STREAM STREAM, AND STREAM S ö a second peptide template XBBXX and their derivatives selected from the group consisting of XBBXBBX, XBBXXBBX, BXXBXXB, XBBZXXBB, and XBBXXBBXXBBX; where B = at least one positively charged amino acid; X = at least one non-polar hydrophobic amino acid; Z = at least one aromatic amino acid, and where B, X and Z may be separated by one or more other amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of neutrophils. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells. AAV57463 to AAV57557 represent sequences used in the exemplification of the present invention present invention describes an antimicrobial peptide (AP) for direct Gaps Antimicrobial peptides for potentiating antimicrobial agents active Antimicrobial; metapeptide; PMP-2; platelet microbicidal protein; antibiotic; infection; fungal; bacterial; neutrophil; apoptosis. ö 1; Indels Score 53; DB 2; Pred. The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acide corte sequence (derived from PMP-1 and PMP-2, platelet microbiodial protein), and retromers, truncations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial agents active against organisms such as becteria and fungi comprising a peptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as becteria and fungi comprising a peptide of 13-74 containing an amino acid and retromers, extensions, combinations of the peptides described above, and retromers, extensions, combinations of the peptides described above, and retromers, extensions, combinations and fungion; and (2) antimicrobial peptides for potentiating antimicrobial activity of antimicrobial peptides are useful as individual antimicrobial agents that enhance, potentiate or restore efficacy of conventional antimicrobials, agents that enhance the antimicrobial for use in foods and cosmetics and as agents to improve efficiency of molecular foods and cosmetics and as agents to improve efficiency of molecular belongy techniques. Antimicrobial peptides of prior art have generally been considered to have undesirable toxicity, immunogenicity and short that have potent and broad are based upon natural antimicrobial peptides that have potent and broad

gainst organisms such as bacteria and fungi comprising a peptide of 5-150 amino acide containing a 7-13 amino acide core sequence (derived from PMP-1 and PMP-2, platelet microbiocidal protein), and retromers, truncations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as or for potentiating antimicrobial agents and fungi comprising a peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fungion (2) antimicrobial peptides for potentiating antimicrobial activity of attimicrobial peptides are useful as individual antimicrobial agents, specifically against bacteria and fungi, agents in combination with other specifically against bacteria and fungi, agents in combination with other antimicrobials, agents that enhance the antimicrobials.

Conventional antimicrobials, agents that enhance the antimicrobial conventional antimicrobials, agents that enhance the antimicrobial.
                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting
spectrum activity against pathogens exhibiting multiple antibiotic resistance. They exhibit lower inherent mammalian cell toxicities and overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antimicrobial; platelet microbiocidal protein; PMP-1; PMP-2; bacterial infection; fungal infection; fungicide; disinfectant; preservative; foods; cosmetic; multiple antibiotic resistance; rabbit;

The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against corganisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZBXBXB and its derivatives selected from XZBZBXBXB, BXXZXB, XBBXZXBB, and BBXZBBXZ; and (b) a second peptide template XBBX and their derivatives selected from the group consisting of XBBXBBX, XBBXXBBX, BXXBXXB, XBBXXBB, and and consisting of XBBXBBX, XBBXXBBX, BXXBXXB, BXBBXXBB, and consisting of XBBXBBX, XBBXXBBX, BXXBXXB, BXBBXXBB, and consisting of XBBZABBX, XBBXXBBX, BXXBXXB, ABBZXBBX, and consisting of XBBZABBX, XBBXXBBX, BXXBXXB, ABBZXBB, and consisting of XBBZABBX, XBBXXBB, BXXBXB, and consisting of XBBZABBX and acid, and where B, X and Z may be separated by one or more other amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of neutrophils. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells. AAYS7463 to AAX5757 represent sequences used in the exemplification of the present invention
foods and cosmetics and as agents to improve efficiency of molecular biology techniques. Antimicrobial peptides of prior art have generally been considered to have undesirable toxicity, immunogenicity and short half-lives due to biodegradation. The peptides of the present invention are based upon natural antimicrobial peptides that have potent and spectrum activity against pathogens exhibiting multiple antibiotic resistance. They exhibit lower inherent mammalian cell toxicities and overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antimicrobial peptides for potentiating antimicrobial agents active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antimicrobial; metapeptide; PMP-2; platelet microbicidal protein; antibiotic; infection; fungal; bacterial; neutrophil; apoptosis.

The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acide containing a 7-13 amino acide core sequence (derived from PMP-1 and PMP-2, platelet microbiolial protein), and retromers, truncations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial agents active against organisms such as bacteria and fungi comprising a peptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as artimicrobial peptides of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fungions; and (2) and retromers extensions, combinations and fungion; The artimicrobial peptides are useful as individual antimicrobial agents, specifically against bacteria and fungi, agents in combination with other antimicrobials, agents that enhance, potentiate or restore efficacy of antimicrobials, agents that enhance the antimicrobial conventional antimicrobials, agents that enhance the antimicrobial conventions of leukocytes, as disinfectants or preservatives for use in foods and cosmetics and as agents to improve efficiency of molecular considered to have undesirable toxicity, immunogenicity and short that have due to biodegradation. The peptides of the present invention are based upon natural antimicrobial peptides that have potent and broad

The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against conganisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZBXBXB and its derivatives selected from XZBBZBXRXB, BXZXXZB, XBBXZXBBX and BBXZBBXZ, and (b) a second peptide template XZBZXXB, XBBXZXBBX and BBXZBBXZ, and (b) a second peptide template XBBXXXBX, XBBXZXBB, and (b) a least one positing of XBBXBBX, RBBXXBXB, BXXBXXB, XBBZXXBB, and XBBZXXBBXZBBX; where B = at least one positively charged amino acid; X = at least one aromatic amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of
spectrum activity against pathogens exhibiting multiple antibiotic resistance. They exhibit lower inherent mammalian cell toxicities and overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradelion, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  neutrophils. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells. AAY57463 to AAY57557 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antimicrobial peptides for potentiating antimicrobial agents active against bacteria and fungi.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antimicrobial; metapeptide; PMP-2; platelet microbicidal protein; antibiotic; infection; fungal; bacterial; neutrophil; apoptosis.

Sequence 13 AA;

```
The invention interacts to an animalizable propertion comprising a peptide of 5-
150 amino acids containing a 7-13 amino acid core sequence (derived from
PMP-1 and PMP-2, platelet microbiocidal protein), and retromers,

truncations, extensions, combinations, fusions and their derivatives. The
possible structures are fully described in the specification. Also

cr included are (i) an antimicrobial peptide composition for direct activity

or for potentiating antimicrobial peptide composition for direct activity

cr for potentiating antimicrobial apente active against organisms such as

bacteria and fungi comprising a peptide of 13-74 containing an amino acid

core sequence selected from truncations of the peptides described above,

and retromers, extensions, combinations of the peptides described above,

and retromers, extensions, combinations and fusions; and (2)

antimicrobial peptides for potentiating antimicrobial activity of

antimicrobial peptides for potentiating antimicrobial activity of

cantimicrobial peptides are useful as individual antimicrobial agents

conventional antimicrobials, agents that enhance the antimicrobial activity of

conventions of leukocytes, as disinfectants or preservatives for use in

conventional antimicrobials peptides of prior art have generally

conventions of leukocytes, as disinfectants or preservatives for use in

conventional antimicrobial peptides of prior art have generally

conventions of leukocytes, as disinfectants or preservatives for use in

considered to have undesirable toxicity, immunogenicity and short

considered upon natural antimicrobial peptides that have potent and broad

spectrum activity against pathogens exhibiting multiple antibiotic

creistance. They exhibit lower inherent mammalian cell toxicities and

covercome problems of toxicity immunogenicity, and shortness of duration

creistance problems of toxicity immunogenicity, and shortness of effectiveness and ero biodegradation, retaining activity in plasma and

creistance and described active and antimicr

                                                                                                              The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZBXBXB and its derivatives selected from XZBBZBXBXB, BXXZXB, XBBXXXBXB and its derivatives selected from the group consisting of XBBXBBX, BBXXXBX, XBBXXBBX, and their derivatives selected from the group consisting of XBBXBBX, XBBXXBBX, BXXBXXB, XBBXXBB, and XBBXXBBX, where B = at least one positively charged amino acid; X = at least one non-polar hydrophobic amino acid; Z = at least one aromatic amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides can be used to treat bacterial and fungal infections. The peptides one bused to treat bacterial and fungal infections. The peptides one leffect cellular disruption and rapid apoptosis of microbial cells. AX57463 to AAX57557 represent sequences used in the exemplification of the present invention
                                                                                        ö
                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antimicrobial peptides for potentiating antimicrobial agents active against bacteria and fungi.

```
The invention relates to an antimatorobial peptide composition for use against organisms such as bacteria and fungi composition for use gainst organisms such as bacteria and fungi comprising a peptide of 5-
150 amino acids containing a 7-13 amino acid core sequence (derived from the period are (i) an antimatorobial peptide composition. Also possible structures are fully described in the specification. Also concluded are (i) an antimatorobial peptide composition for direct activity or for potentiating antimicrobial peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers extensions, combinations of the peptides described above, and retromers extensions, combinations of the peptides described above, antimicrobial peptides for potentiating antimicrobial activity of antimicrobial peptides for potentiating antimicrobial activity of antimicrobial peptides are useful as bacteria and fungi. The combination with other antimicrobial apprides are useful as individual antimicrobial antimicrobials, agents that enhance, potentiate or restore efficiacy of conventional antimicrobials, agents that enhance the antimicrobial functions of leukocytes, as disinfectants or preservatives for use in clodes and cosmetics and as agents to improve efficiency of molecular belonged to have undesirable toxicity, immunogenicity and short ball-lives due to biodegradation. The peptides of the present invention are based upon natural antimicrobial peptides shibiting multiple antibiotic resistance. They exhibit lower inherent mammalian cell toxicity and and controlled to the present machine and expected to the mammalian cell toxicities and and antimicrobial an
New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              vertauce. They exhibit lower inherent mammalian cell toxicities and overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an antimicrobial peptide composition for use
                                                                                                                                                                                                                                                                                                                      Disclosure, Page 130, 221pp; English.

The present sequence is an antibacterial peptide C18G, which was modified by adding a Cys-amide to the carboxy terminus. This was used to produce an immunoadapter conjugate. Making a conjugate comprises covalently.

Inking a surface-binding ligand (SBL) to a hapten via a spacer to form a ligand-spacer-hapten (LSH) compound, and reacting the compound with immunoglobulin (Ig) under conditions that allow for non- covalent binding of the Ig to the hapten of the compound. The conjugate can be used for the diagnosis, prevention and treatment of microbial infections, e.g. the diagnosis, influenza, viremia or fungemia. They can also be used in neurology, cancer and endocrinology, where Ig targeting can provide desired therapeutic effects. The methods for producing a conjugate can use small molecule targeting ligands to efficiently direct otherwise unreactive Ig to microbial targets. This targeting allows Ig to react with microbial structures that may not normally be accessible to Ig, or are incapable of stimulating antibody production
                                                                                                                                                                                                                                                                      Antimicrobial compans. for diagnosis and therapy - comprising microbial surface binding ligand-spacer-hapten, non-covalently associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antimicrobial, metapeptide, PMP-2; platelet microbicidal protein; antibiotic; infection; fungal; bacterial; neutrophil; apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antimicrobial peptide nRP-1:cRP-13 SEQ ID NO:46.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Compsns. for treating infections sensitive to beta-lactam antibiotics -
comprise beta-lactam antibiotic and cationic oligopeptide, useful against
Enterobacteriaceae, Pseudomonas aeruginosa etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is a specific example of a cationic oligopeptide suitable for use in compositions with beta-lactam antibiotics. The peptide has an alphabaledical structure and is believed to act as an ionophore, making holes in bacterial cell membranes. The peptide and antibiotic act synergistically. See AAR13924-R13930 and AAR13936-7. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antimicrobial; immunoglobulin; surface binding ligand; hapten; sepsis; influenza; viremia; fungemia; neurology; cancer; endocrinology;

                                                                                                                                                                                                                                                                                                                                                                                                                               ઠે
                                                                                                                                                The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZBXBXB and its derivatives selected from XZBBZBXBXB, BXZXXB, XBBXZXBBX and BBXZBBXZ; and (b) a second peptide template XBBXXXBX, XBBXZXBB, and their derivatives selected from the group consisting of XBBXXBBX, XBBXXXBB, BXXXBX, BXBXXXBB, and consisting of XBBXXBBXXBBX, BXXXBXB, BXBXXBB, and consisting of XBBZXBBXZBBX; and their derivatives selected from the group consisting of XBBXXBBX and their derivatives selected from the action of the peptides can be used to treat bacterial and fungal amino acids. The peptides can be used to treat bacterial and fungal neutrophils. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells. AANS7463 to AANS7557 represent sequences

the present an according to the compounds computed to the present and the present and the present and the sease of the present and the sease with one of more fambriane is a method of treatment for bacterial disease with one of more fambriane.

C a subject with symptoms of bacterial disease with one or more fambriane. Individual compounds comprising a mannose of a monemeric configuration, an alpha-aromatic or heteroaromatic ling attached to the mannose by a alprosidic or pseudoglycosidic linkage and a functional group which provides a site for chemical modification remote from the mannose and placopy or paramaceutically carrier; and (b) administering the fimbriae-binding compound to the subject. Administration of one or more fimbriae-binding compound to the subject. Administration of one or more fimbriae-binding compound to the subject. Administration of one or more fimbriae-binding compounds can be used for treating subjects with symptoms of and for subjects at risk from bacterial diseases. Treatment of and prevention of blood-borne and toxin mediated diseases in particular sepsis in humans and other animals can be carried out and the in vivo neutralisation of the identify bacteria according to their cell binding specificity's through conjugation to reporter substances such as dyes, luminescent or fluorescent molecules and enzymes. The compounds also inhibit the agglutination of yeast cells induced by type I pili bearing bacteria. The present sequence is used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.
                                                                                   present invention describes a therapeutic formulation comprising N-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antimicrobial; platelet microbiocidal protein; PMP-1; PMP-2;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WO200255554-A2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         mutant; mutein.
```

The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acide containing a 7-13 amino acid core sequence (derived from PMP-1 and PMP-2, platelet microbiocidal protein), and resromens, truncations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial agents active against organisms such as or for potentiating antimicrobial agents active against organisms such as core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fusions; and (2) antimicrobial peptides for potentiating antimicrobial activity of cluckocytes against organisms such as bacteria and fungi. The artimicrobial peptides are useful as individual antimicrobial activity of antimicrobial aparents and fungi, agents in combination with other antimicrobials, against bacteria and fungi, agents in combination with other antimicrobials, against bacteria and fungi, agents in combination with other antimicrobials, against bacteria and fungi, agents of molecular for conventional antimicrobials, agents that enhance the antimicrobial considered to have undesirable to improve efficiency of molecular blology techniques. Antimicrobial peptides of prior art have generally considered to have undesirable toxicity, immunogenicity and short half-lives due to biodegradation. The peptides of prior art have generally are based upon natural antimicrobial peptides that have potent and broad are based upon natural antimicrobial peptides that have potent and broad are based upon natural antimicrobial peptides of prior art have generally resistance mainty against pathogens exhibiting multiple antibiotic and are based upon natural antimicrobial peptides of prior art have generally resistance mainty against pathogens exhibiting multiple antibiotic and antimicrobial peptides of processed and processed and processed and proc overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide resistance. They exhibit lower inherent mammalian cell toxicities and \$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$

Antimicrobial compsns. for diagnosis and therapy - comprising microbial surface binding ligand-spacer-hapten, non-covalently associated with .uilndolgonnin

Example 39; Page 150; 227pp; English.

The present sequence is a peptide designated C19G. This was used to produce an immunoadapter conjugate. Making a conjugate comprises covalently linking a surface-binding ligand (SBL) to a hapten via a spacer to form a ligand-spacer-hapten (LSH) compound, and reacting the compound with immunoglobulin (Ig) under conditions that allow for noncovalent binding of the Ig to the hapten of the compound. The conjugate of an be used for the diagnosis, prevention and treatment of microbial infections, e.g. sepsis, influenza, viremia or fungemia. They can also be used in neurology, cancer and endocrinology, where Ig targeting can provide desired therapeutic effects. The methods for producing a provide desired therapeutic effects. The methods for producing a conjugate can use small molecule targeting ligands to efficiently direct otherwise unreactive Ig to microbial targets. This targeting allows Ig to therwise unreactive Ig to microbial targets. This targeting allows Ig to react with microbial structures that may not normally be accessible to Ig, or are incapable of stimulating antibody production

Therapeutic formulation comprising N-(phenylalanyl)-4-aminophenyl-alpha-D-mannopyranoside or its cysteinyl derivative useful for diagnosing and treating bacterial diseases.

Example 39; Col 84; 89pp; English.

The present invention describes a therapeutic formulation comprising N-(phenylalanyl)-4-aminophenyl-alpha-D-mannopyranoside (I). Also described is a method of treatment for bacterial disease comprising: (a) providing

binding compounds comprising a mannose of an anomeric configuration, an alpha-aromatic or heteroarcomatic ring attached to the mannose by a glycosidic or pseudoglycosidic linkage and a functional group which provides a site for chemical modification remote from the mannose and a pharmaceutically carrier; and (b) administering the fimbriae-binding compound to the subject. Administration of one or more fimbriae-binding compounds can be used for treating subjects with symptoms of and for subjects at risk from bacterial diseases. Treatment of and prevention of blood-borne and toxin mediated diseases in particular sepsis in humans can dether animals can be carried out and the in vivo neutralisation of the effects of endotoxin is also possible. The compounds may also be used to identify bacteria according to their cell binding specificity's through conjugation to reporter substances such as dyes, luminescent or fluorescent molecules and enzymes. The compounds also inhibit the agglutination of yeast cells induced by type I pili bearing bacteria. The present sequence is used in the exemplification of the present invention of bacterial disease with one or more fimbriae-

Antimicrobial peptides for potentiating antimicrobial agents active against bacteria and fungi.

Disclosure, Page 108; 166pp, English.

The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZBXBXB and its derivatives selected from XZBBZBXBXB, BXZXXB, XBBXXXBBX and its derivatives a second peptide template XBBX and their derivatives selected from the group consisting of XBBXXBBX, BXXBXXB, XBBXXXBB, and KB XBBXXBBX, where B = at least one positively charged amino acid; X =

ô at least one non-polar hydrophobic amino acid; Z = at least one aromatia amino acid, and where B, X and Z may be separated by one or more other amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of neutrophils. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells. AAY57463 to AAY57557 represent sequences used in the exemplification of the present invention 2; Length 14; 67.2%; 80.0%; Sequence 14 AA; Query Match 888888888

(first entry) 21-OCT-2002

Rabbit platelet microbicidal protein, PMP-2, based peptide #3.

Antimicrobial; platelet microbiocidal protein; PMP-1; PMP-2; bacterial infection; fungal infection; fungicide; disinfectant; preservative; foods; cosmetic; multiple antibiotic resistance; rabbit;

Oryctolagus cuniculus, mutant; mutein.

WO200255554-A2 Synthetic 

18-JUL-2002

(HARB-) HARBOR-UCLA RES & EDUCATION INST.

Yeaman MR,

WPI; 2002-590659/63.

New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting infections caused by organisms, multiple antibiotic resistance.

Disclosure; Page 129; 221pp; English.

quaint organisms such as bacteria and fundi computating a peptide of 5150 amino acids containing a 7-13 amino acid core sequence (derived from
150 amino acids containing a 7-13 amino acid core sequence (derived from
150 amino acids containing a 7-13 amino acid core sequence (derived from
150 amino acids containing a 7-13 amino acid core sequence (l) an antimicrobial peptide composition for direct activity
150 core sequence selected from truncations of the peptides described above,
151 core sequence selected from truncations of the peptides described above,
152 core sequence selected from truncations and funsions; and (2)
153 and retromers, extensions, combinations and funsions; and (2)
154 containing an amino acid
155 core sequence selected from truncations and funsions; and (2)
156 and retromers, extensions, combinations and funsions; and (2)
157 containing an amino acid
158 core sequence selected from truncations and funsions; and (2)
158 core sequence selected from truncations and funsions; and (2)
158 core sequence selected from truncations and funsions; and (2)
158 core sequence selected from truncation and funsions; and (2)
158 core sequence selected from truncation and funsions; and (2)
159 core sequence selected from truncation and funsion selected from truncation with other antimicrobial segues that enhance, potentiate or restore efficacy of invention relates to an antimicrobial peptide composition for use

```
conventional antimicrobials, agents that enhance the antimicrobial functions of leukocytes, as disinfectants or preservatives for use in foods and cosmetics and as agents to improve efficiency of molecular biology techniques. Antimicrobial peptides of prior art have generally been considered to have undesirable toxicity, immunogenicity and short half-lives due to biodegradation. The peptides of the present invention are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic resistance. They exhibit lower inherent mammalian cell toxicities and overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide

Sequence 3, Application US/09525269A

Patent No. 6743769

GENERAL INFORMATION:
APPLICANT: Steman, Michael R.
TITLE OF INVENTION: Antimicrobial Peptides and Derived
TITLE OF INVENTION: Metapeptides
FILE REFERENCE: 66742-025 (HRS614)

CURRENT APPLICATION NUMBER: US/09/525,269A

CURRENT PILING DATE: 2000-03-13

PRIOR FILING DATE: 1998-02-18

NUMBER OF SEQ ID NOS: 39
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 ARYKKFKKKLLKS 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ARYKKFKKKLIKS 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              US-08-233-203-8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ઠે
                                                              Sequence 6, Application US/08233203
Patent No. 5409998
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Blake, James J.
APPLICANT: Cosand, Wesley L.
TITLE OF INVENTION: COMPOSITONS AND METHODS FOR TREATING
TITLE OF INVENTION: INFECTIONS CAUSED BY ORGANISM SENSITIVE TO BETA-LACTAM
TITLE OF INVENTION: ANTIBIOTICS
NUMBER OF SEQUENCES:
ADDRESSEE: Bristol-Myers Squibb Company, Patent
ADDRESSEE: Department
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            INFECTIONS CAUSED BY ORGANISM SENSITIVE TO BETA-LACTAM ANTIBIOTICS

Patent No. 526221
GENEAL INFORMATION:
APPLICANT: Almquist, Ronald G.
APPLICANT: Almquist, Ronald G.
TITLE OF INVENTION: ISOLATED ATRIAL PEPTIDE-DEGRADING
TITLE OF INVENTION: BNZYME AND NOVEL COMPOUNDS USEFUL AS INHIBITORS THEREOF NUMBER OF SEQUENCES: 13
CORRESPONDENCE ADDRESS:
ADDRESSER: ITALL & Manella
                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GENERAL INFORMATION:

TITLE OF INVENTION:

TITLE OF INVENTION: derived antimicrobial peptide or a derivative thereof

FILE REFERENCE: SONN:030US

CURRENT FILING DATE: 2003-02-14

PRIOR FILING DATE: 2001-08-17

PRIOR APPLICATION NUMBER: RCT/EP01/09529

FRIOR APPLICATION NUMBER: A 1416/2000

PRIOR APPLICATION NUMBER: A 1416/2000

NUMBER OF SEQ ID NOS: 23

SOFTWARE: Patentin Ver. 2.1

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
